Collier Exposed Investigative Project

Telemetry Capture – Target Access Event - CE-T07

Author: *Michael Szabó* — Cyber Forensic Expert, Collier Exposed Investigative Project
Document Type: *Technical Intelligence Note*
Prepared: 14 March 2026
Collection Method: Controlled short-URL telemetry capture following delivery of a physical letter containing a unique tracking link.

Target Respondent

Field	Detail
Case ID	**CE-T07**
Name	**Owner / Occupier**
Address	*34 Queen Street, Lochmaben, Lockerbie, DG11 1PS*

#COLLIEREXPOSED

Field	Detail
Engagement Method	Physical letter containing a unique shortened URL
Intended Outcome	Confirmation of receipt and capture of device/network telemetry upon link access

Independent Verification

Resource	Link
Archived snapshot	https://archive.ph/K37QL

This link allows third parties to independently verify the telemetry records referenced in this document.

Total Access Events: 9

Unique Accesses: 6

Device Signature

Field	Value
Device Type	**Apple iPhone**

#COLLIEREXPOSED

Field	Value
Observed Operating Systems	iOS 17.2 – iOS 17.4
Observed Browsers	Safari 17.2 – Safari 17.4
Location Accuracy	Mixed (IP and GPS-derived)
HTTP Referrer	*None recorded*
Bot Detection	Negative
User Agent	Mozilla/5.0 (iPhone; CPU iPhone OS 17_x like Mac OS X) AppleWebKit/605.1.15 (KHTML, like Gecko) Version/17.x Mobile/15E148 Safari/604.1

Analytical Observations

Nine access events (*six unique*) were recorded over a three-month period, indicating **sustained and repeated interaction** with the tracking link.

Device characteristics remain **consistent across all events**, strongly supporting attribution to a single handset.

#COLLIEREXPOSED

Higher-accuracy telemetry repeatedly places the device within the *Lochmaben area*, in close proximity to the delivery address.

Additional access events from *Guildford and London* suggest mobility or network routing variation rather than separate users.

No HTTP referrer data was recorded across any event.

The dataset supports a **high-confidence conclusion** that a single iPhone device repeatedly accessed the tracking link, with multiple instances placing it within metres of the intended address, confirming sustained engagement with the delivered correspondence.
